

More efficiency for your Team with ScriptRunner®

INSTANT AUTOMATION & COLLABORATION SUITE FOR POWERSHELL.

ScriptRunner® is the Instant Automation & Collaboration Suite for PowerShell, developed by AppSphere, and is the answer to the complex challenges of management and automation. This solution supports administrators, system managers and DevOps teams in the efficient management and fast automation of daily tasks in the administration of systems in the private, hybrid, and public cloud.

Ensure a complete control over all PowerShell activities in your team and link ScriptRunner® with third-party systems such as monitoring, ITSM, help desks and rights management, and other applications for cross-system automation in your control cycle.

DO YOU HAVE THE CLEAR OVERVIEW?

Systems, applications, and software for Windows are being increasingly administrated with Windows PowerShell only. This brings a lot of great advantages. However, automation and delegation is more than manually implementing and distributing scripts.

” We automate complex regulatory cycles through integration into our monitoring environment. ScriptRunner® reduces costs and ensures quality in our administration and support tasks.” *Andreas Engmann, VINTIN Services GmbH, Business Development*

Are you already using a central platform for all activities with PowerShell in your team? Do you have transparency and control over the PowerShell activities of your IT and DevOps teams? Can you always be sure that PowerShell scripts are carried out with quality assurance and reproducibility? Are you fulfilling the IT compliance requirements for all scripting activities? Do you already fully exploit the potential of automated processes and delegated routines?

PROFIT FROM POTENTIALS NOW!

ScriptRunner® is the ideal platform to quickly, easily, and securely introduce and use the leading scripting technology of Microsoft PowerShell in your company.

Your benefit:

- Return on investment under twelve months
- Savings potential via automation and delegation of more than 40%
- Optimisation of overview and control
- Full transparency of all reporting and auditing processes
- Typically 50 to 250 cases with ScriptRunner®
- Improved collaboration and security

HOW IT WORKS

With ScriptRunner® you can easily, quickly and securely automate or delegate with PowerShell – high security and transparent traceability included! ScriptRunner® brings everything you need for the professional use of PowerShell in your team.

AUTOMATION BY INTEGRATION IN THIRD-PARTY SYSTEMS

A wide range of integration technology and connectors enables ScriptRunner® to interact directly with third-party systems and use its functions in other applications. You will thereby create fully automated processes, increase productivity and quality, save time, and reduce expenditure and costs for routine administrative tasks.

DELEGATION OF ROUTINE ACTIVITIES

Provide more flexibility in your team. The guideline-based and secure delegation of script actions to the help desk is now possible – without having to allow administrative rights with access! You can also simplify representation within your team. Your employees will immediately experience higher efficiency and satisfaction.

EASY AND QUICK TO USE

The introduction of the ScriptRunner® platform succeeds demonstrably quick and easy, directly in day-to-day operations and without any additional project effort. You will thereby already be making use of the potential and the possibilities from the first script, with an ROI in less than twelve months.
